

PROJECT DESIGN PHASE

SOLUTION ARCHITECTURE

Date	22 september 2022
Team id	3CFDCF419BD3A95BBA14C9531550BCBC
Project name	Indian food eda

Solution Architecture:

Solution architecture is a complex process – with many subprocesses – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the

Software to project stakeholders.

- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed,

And delivered.
